Re: Construction Notification
Transcontinental Gas Pipe Line Company, LLC (Transco)
New York Bay Expansion Project – LNYBL Replacements
FERC Docket Number CP15-527-000

Dear Landowner,

As you may be aware, Transcontinental Gas Pipe Line Company, LLC (“Transco”) owns and operates a 10,500-mile natural gas transmission system from Texas to the New York City area. Transco supplies approximately 60% of all natural gas that is consumed in New York, New Jersey and southeast Pennsylvania. The existing Transco system either directly affects your property or is proximate to your property. In order to meet the growing demand for natural gas in the Northeast, Transco is moving forward with a planned system expansion known as the New York Bay Expansion Project. The Federal Energy Regulatory Commission (FERC) approved the project in July 2016.

Construction activities for this phase of the project are scheduled to begin as early as February 13, 2017 and will take place entirely within Transco’s existing permanent easement and acquired temporary workspace. Once begun, this phase of construction activity will last approximately through mid-September. You can expect to see workers, trucks and construction equipment in and around Transco’s right of way.

Please feel free to contact me should you have any questions or concerns. As always, we greatly appreciate your patience during this process.

Sincerely,

A handwritten signature in black ink that reads "Patrick J. McClusky". The signature is written in a cursive style with a large, stylized "P" and "M".
